

FOR CALCULATING THE EXTERNAL RAILING KIT PURCHASE

EXTERNAL RAILING-KIT: it includes 5 balusters, one handrail and all necessary fixing. For **KOMPACT 74** in the **Diagram 2** it is possible to calculate the number of balusters needed on the external side of the staircase (the balusters are represented by numbers and points).

Example: if you want to assemble the external railing only on the left side of the staircase (**Diagram 2**), you must add:

$2 + 4 + 3 = 9$ balusters.

Therefore 2 external railing kits must be purchased.

DIAGRAM 2

EXTERNAL RAILING-KIT: it includes 5 balusters, one handrail and all necessary fixing. For **KOMPACT 89** in the **Diagram 3** it is possible to calculate the number of balusters needed on the external side of the staircase (the balusters are represented by numbers and points).

Example: if you want to assemble the external railing only on the left side of the staircase (**Diagram 3**), you must add:

$2 + 2 + 2 + 5 + 4 = 15$ balusters.

Therefore 3 external railing kits must be purchased.
